What do they do

Examine the relationship between insider control and earnings management focussing on “alignment” and “entrenchment” hypotheses.

Alignment hypothesis

Concentrated ownership would reduce the incentives of controlling insiders for opportunistic earnings management.

Entrenchment hypothesis

Concentrated ownership creates incentives to engage in opportunistic earnings management to extract private benefits of control from minority shareholders.

Find U-shaped relationship between insider control and earnings management.

What do they do

You need to articulate up front, in the abstract and conclusion, the question of "why this study is important".

You can use 5th, 6th and 11th paragraphs ---- to write the first paragraph.
